Side Mounting Float Switch

Innovation · Quality · Sharing

INTRODUCTION

WORKING PRINCIPLE

The reed switch relies on two basic scientific principles namely: buoyancy and magnetism. Buoyancy causes the float (which contains a magnet) to rise with the liquid and magnetism helps open and close the switch.

A change in liquid levels raises or lowers the float up or down. The end of the pivot arm (non float side) contains a permanent magnet that can repel the switch magnet (inside the stationary 'stem' of the entire structure).

When the float magnet moves close to the switch's stationary stem, the float magnet repels the switch magnet which either opens or closes the Electrical circuit.

FEATURES

The side mounted float level sensor (FF series) are manufactured specifically for horizontal mounting on tanks or vessels. They work well as high or low level controls.

1. Both Micro-Switch types and Reed Switches are available.
2. Mounting flanges are custom-made. (JIS, DIN,ANSI).
3. A wide variety of floats for different solution's specific gravities (S.G.) are available.
4. Wetted parts material ranges from plastics, stainless steel, anti-corrosive and explosion proof types.

WIRING

Reed Switch---1A,60W 220Vac/200Vdc (FF29, FF45, FF55)
1A,50W 220Vac/200Vdc (FF30, SPST)
1A,30W 220Vac/200Vdc (FF89)
Micro Switch---5A/250Vac (FF19, FF40, FF50, FF90, FF62)
3A/250Vac (FF79)

Nozzlelength

The length of the nozzle has to be comply with the pipe diameter. If the length of nozzle is too long it will affect the switching movement. The suggested maximum length of the nozzle is listed as below chart:

(Unit: mm)

Pipe inner diameter (A)	Float Ø41X150L		Float Ø50X150L		Float Ø75X120L	
	Flange connection max.(B)	Screw connection (C) max.	Flange connection (B) max.	Screw connection (C) max.	Flange connection (B) max.	Screw connection (C) max.
45	102	91	⊕	⊕	⊕	⊕
50	103	92	102	91	⊕	⊕
55	105	94	103	92	⊕	⊕

ANTI-CORROSIVE MODELS

FF80EFM --- PC Housing

FF81E --- Without Housing

Wetted parts : P.P.

Cable spec. : PVC 3x0.75 mm²

► FF80EFM

► FF81E

SQUARE FLANGE & TEST ACCESSORIES

► FF90CLO

1. Housing material: Aluminum (IP65)
2. Suitable S.G.: >0.65
3. Operation temp.: $-20\sim 100^{\circ}\text{C}$
4. Contact mode: SPDT(1C)
5. Contact rating: 5A/250Vac
6. Operation pressure: 15kg/cm^2
7. Wetted parts: SUS304
8. Weight: (approx.) 1.2 kg

Drill Hole

Test Board (Optional)

Material: SS41

Please weld test board with level instrument.
Without level dropping, level instrument can
be checked regularly if functions well.

Check list

Check if mechanical parts of level switch function well?
Check if float functions well?

HP415-A23000MG01(29-1108)

IMPORTANCE FOR INSTALLATION

1. SUS304/SUS316 materials are not available for corrosive application.
2. The cable duct(s) must face downward to prevent moisture seeping in.
3. The float and extension rod must be inserted into the bin completely.
4. Check the liquid's S.G. level before installation.
5. The mounting hole must be larger than the external diameter of the float.
6. Don't mount the devices near the bin's inlet or outlet.

Typical Positioning
