

Electromagnetic Flow Meter

Innovation · Quality · Sharing

FLOW MEASUREMENT FIELD

FineTek is the only inspection institution that owns a Class 2 flow test laboratory in Taiwan. With the most professional R&D and Design Team, it can design and develop high-accuracy electromagnetic flow meters. Moreover, it conducts calibration in Class 1 Flow Laboratory of the National Measurement Laboratory (ITRI Measurement Center), so as to guarantee the flow accuracy on the measurement field.

FineTek's flow laboratory has received certification from the Taiwan Accreditation Foundation and conforms to the regulations of international organizations such as ILAC and APALC. It has the complete ability of uncertainty testing and rating for flow test.

ELECTROMAGNETIC FLOW METER

EPD electromagnetic flow meter is a high-accuracy flow meter manufactured based on the latest international technology. It is widely applied in papermaking, chemical industry, metallurgical industry, drainage, waste water treatment, liquid high-pressure metering, medical care, food, and environmental protection industries.

It is used to measure the non-magnetic liquid and plasma in the enclosed pipe.

WORKING PRINCIPLE

The working principle of the electromagnetic flow meter is based on the Faraday law of electromagnetic induction. When the conducting liquid flows in the orthogonal direction of the magnetic line direction, it will cut the magnetic lines and generate induced voltage, which shows linear relationship with the flowing speed. Thus, the fluidic volume flow can be calculated.

EPD electromagnetic flow meter is mainly composed of the sensor and transmitter. The measuring tube of the sensor is equipped with the excitation coils upward and downward. The transmitter supplies the excitation current, which generates the magnetic field which goes through the measuring tube once it is powered on. A pair of induction electrodes installed on the inner side of the measuring tube comes in contact with the liquid to guide the induced voltage to the sensor.

APPLICATIONS

- Waste water treatment
- Tapped water purification
- Sewerage
- Sea water desalination module
- Dyeing machines
- Solar energy and PCB wet processing
- Food manufacturing
- Pharmaceutical machines

FEATURES

Low impact on environmental matter

- The measurement results are not affected by the change in liquid density, viscosity, temperature, pressure and conductivity.
- It can be widely applied in the conducting liquids that may contain fiber, solid granules and suspended matters.
- Enclosure protection rating: IP67/NEMA 4X

Wide measurement range & high efficiency

- The wide measurement turndown ratio can be reach 1:100, which can be set randomly and achieve high accuracy for small flow measurement.
- Highly-integrated backlit display of two rows, dual isolation, parameter setting, menu-type operation, memory function, reliable programming, password lock and access, small signal elimination, non-linear correction and two-way measurement.
Various outputs: Current output 4~20mA,
■ frequency output 2~8KHz and RS485 communication.

Multiple self-diagnosis function

- Power-saving and low fault rate: The measuring tube is without baffle and movable parts, so it won't cause pressure loss and jam.
- Smart self-detection and self-diagnosis function, as well as various alarms

The low installation cost

- It is easy-to-install with low requirements for the straight tube section (Front 5D and rear 2D)

IECEX ,CSA Explosion proof(EPD30)

Available for records for parameter modifications, boot/ shut down device(Optional)

Authority management is available in menu (Option)

SPECIFICATION

Item	EPD30 Standard type	EPD34 Remote type
Display	LCM 128*64 pixel backlit type	
Buttons	Tri-button operation	
Communication interface	RS-485 (Modbus)	
Accuracy	±0.5% of reading@1m/s(0.2% optional)	
Medium temperature	-20 ~ 120 °C(PTFE Lining)	
Ambient temperature	-40 ~ 70 °C*(-40 ~ 60 BC applied for Ex proof, as:IECEx)	
Fluidic conductivity	> 5 uS/cm	
Measuring scope	0.1m/s ~ 10m/s	
Current output accuracy	0.1% of Pulse Output Accuracy Temperature coefficient (100ppm/°C)	
Operating pressure	16 Kg/cm ² (Please contact FineTek if pressure requested more than16 Kg/cm ²)	
Current output mode	Proactive	
Analog output	4 ~ 20mA	
Maximum load of current output	< 700W	
Alarming current	3.6mA or 22 mA	
Frequency output scope	2 ~ 8 KHz	
Pulse width	Automatic (pulse width 50%)	
Pulse mode	Isolated NPN Transistor output 32vdc/200mA	
Time constant	1~100 s	
Control output (DO)	Isolated NPN Transistor output 32vdc/200mA; 2-CH	
Control input (DI)	Dry contact ON< 200W ; 1,000W< OFF ; 1-CH	
Data logger(Optional)	500 items. With calendar (Internal battery: Lift time>6 month)	
Baud rate	1200 ~ 57600 bps	
Protection rating	IP67 / NEMA 4X	IP68**(Transducer) IP67/ NEMA 4X (Transmitter)
Enclosure material	Aluminum alloy	
Input power	AC 100~240V or DC 24V(Applied for Exproof, as IECEx ,CSA)	
Power consumption	< 10W	
Wire inlet specification	1/2"NPTx2	1/2"NPT x 2(Transducer), M20 x 1.5 x 4(Transmitter)
Excitation mode	Pulse DC	
Vibration regulation	MIL-STD-202G-201A:2002	
EMC regulation	IEC/EN 61326-1 Class A table2	
Explosion-Proof mark	Exec IIC T6...T4 Gc	None

*It can't display when LCM is lower than -20°C.

**Continuous immersion in 6 meters of water for up to 48 hours,IP68 protection,optional function.

MATERIAL SELECTION

※Electrode material

Electrode material	Anti-corrosion property
Stainless steel (316L)	It is applied in water, sewage and organic and non-organic corrosive medium.
Hastelloy alloy	It is resistant to the corrosion of the medium mixture of oxidizing acid such as Nitric acid, mixed acid or Sulfuric acid. Moreover, it is resistant to the corrosion of the oxidizing salt such as Fe^{2+} or Cu^{2+} or other substances containing oxidants such as the salt solution of hypochlorous acid above the ambient temperature and sea water.
Titanium	It is resistant to the corrosion of sea water, various oxides, salt solution of hypochlorous acid, oxidating acid (including fuming Nitric acid) and organic acid and alkane. It is not resistant to the corrosion of pure reducing acid (such as Sulfuric acid and Hydrochloric acid). However, the anti-corrosion property will be greatly degraded if the acid contains some oxidants.
Tantalum	It has excellent corrosion resistance. Its characteristic is similar to glass. In addition to hydrofluoric acid, nitric acid, alkali, it could resist almost all chemical medium (including boiling hydrochloric acid, nitric acid and sulfuric acid below 175 °C). It could not resist corrosion in alkali.

※Lining material

Lining material	Main properties	Application scope
PTFE	1. Stable chemical properties, resistant to various acid, alkane, and salt solutions and various organic solvents. It is not tolerant to the corrosion of ClF_3 , high-temperature OF_3 and high-speed liquid oxygen and ozone. 2. The anti-abrasion property is average.	1. -20~120°C 2. Strong corrosive medium such as concentrated acid and alkane.
NBR	1. Excellent flexibility, highly tearing force capability, good wear resistance 2. It is resistant to low concentrations of acid, alkali, salt solution; It is not tolerant the corrosion of oxidizing mediums.	1. < 80°C 2. Neutral-strong wearing mineral pulp, coal slurry and mud slurry
Neoprene	1. Neutral wearing capability 2. It is resistant to low concentrations of acid, alkali, acid corrosion.	1. < 80°C 2. Water, Industrial water, Seawater

※Inner tube material inside flow meter's body

Material of inner tube	Anti-corrosion property
Stainless steel (304)	For water, sewage or inorganic, organic media which are mildly corrosive

Q_2 / Q_1	1.6
Q_1 (m³/h)	0.394
Q_2 (m³/h)	0.63
Q_3 (m³/h)	63
Q_4 (m³/h)	78.75

※ Electromagnetic flowmeter complying with OIML R49 standard, straight pipe requirement:U0D0(DN50)

INSTALLATION INSTRUCTIONS

1. The flow meter must be free from strong electromagnetic field. The magnetic intensity of the flow meter installation site must be smaller than 400A/m (It should not be installed near large motors or transformers).
2. It should be installed at the lower point and the vertically upward point of the horizontal pipe. Don't install it at the highest point and the vertically downward point of the pipe.

3. It should be installed at the rising point of the pipe.

4. It should be installed at the lower point of the pipe when it is installed on the pipe with opening for drainage.

5. If the pipe gap exceeds 5m, the air release valve should be installed at the downstream of the sensor. The downstream of the sensor should have some back pressure.

6. The control valve and cut valve should be installed at the downstream of the sensor rather than the upstream.

7. The sensor should be installed at the pump outlet rather than the inlet.

8. The fluidic must flow towards the arrow direction of the flow meter.
9. The axial line of the measuring electrode must be approximate to the horizontal direction (The angle of from the horizontal direction).
10. The measuring pipe must be completely filled with liquid.

INSTALLATION INSTRUCTIONS

11. The straight tube section is required to be at least $5D$ (internal diameter of the flow meter) on the front side, and at least $2D$ on the rear side.

12. When measuring the mixture of different media, the distance between the mixing point and the flow meter must be $30D$ at least.

13. For convenient cleaning and maintenance of the flow meter, a bypass pipe must be installed.

14. When installing the sensor, it should ensure that the measuring pipe and the process pipe must be on the same axial line. For the flow meter with the pipe meter of 50mm or below, the axial line deviation should not exceed 2mm. For those of $DN65 \square DN150$, the axial line deviation should not exceed 3mm. For those of $\geq DN200$, the axial line deviation should not exceed 4mm.

15. The shim installed between the flanges should have excellent anti-corrosion property. The shim should not intrude in the pipe, which will affect the fluidic in the pipe.

16. The sensor and transmitter should be equipped with high-quality independent grounding wire (The section area of the copper core is $1.6mm^2$). The grounding resistance should be $<10\Omega$. If the grounding is poor, it won't work normally. The grounding ring is needed if the pipe connecting with the sensor is insulating, and the material of the grounding ring should be the same as that of the electrode. If the test medium is abrasive, the neck grounding ring should be selected.

16.1 It is for installing the flow meter on the metal pipe not coated with insulating layer internally.

16.2 When installing the flow meter on the protective pipe of the cathode, the pipe with the protection of electrolytic corrosion generally has insulating walls and protruding sides. Thus, during installation, the grounding ring and the flanges on the pipe should be insulating.

16. When installing the flow meter on the plastic pipe or the pipe with insulating coating material, paints or lining, grounding rings on both ends of the sensor should be installed.

EPD APPLICATION / ORDER FORM

Company Profile

Company Name: _____ Contact Person: _____
E-mail: _____ Phone: _____ Tax: _____

Application

Medium: _____ Temperature: _____ Sanitary Degree Request: Yes ☐ NO ☐
Conductivity: _____ Viscosity: _____
Diameter of Tube (DN) : _____ Accuracy Request(%): _____ Ambient Temp.: _____
Normal Flow Rate(m³/h): _____ Max. Flow Rate(m³/h): _____ Min. Flow Rate(m³/h): _____
Connection Spec: _____ Connection Material**: _____
Pressure (Kg/cm²): _____ Max. Static Pressure (Kg/cm²): _____ **SUS304, SUS316, SUS316L
Lining Material*: _____ Electrode Material***: _____

*PTFE、NBR、Neoprene

***SUS316L, Hastelloy Alloy, Titanium, tantalum

Power: ☐ 110Vac ☐ 220Vac ☐ 24Vdc
Output: ☐ 4-20mA/Pulse(freq) ☐ RS-485/Modbus
Grounding: ☐ NO ☐ YES
Installation Direction: ☐ Horizontal ☐ Vertical
Vibration Inside Tube: ☐ NO ☐ YES
Strong Magnetic Nearby: ☐ NO ☐ YES
Explosion Proof: ☐ NO ☐ YES
Explosion Proof Code: _____
